To whom it may concern,

Environ Strategy Consultants, Inc. highly recommends CalClean Environmental for the cleanup of hydrocarbon and chlorinated impacted sites, large or small. We have had great success reducing contaminants in soil and groundwater using their High Vacuum Dual Phase Extraction Systems and we have achieved regulatory closure at long open sites with just one or two events.

Their staff is helpful and professional, exceeding our expectations and going out of their way to take care of all our requests to meet site specific tasks necessary to complete the project. We have found that using CalClean is often the most cost-effective path to closure, and the results are tangible and dramatic.

We are glad that we have found CalClean to assist us on our cleanup projects and we recommend them to anyone needing effective cleanup of highly impacted sites.

Sincerely,

Dane Nygaard
Project Manager
